

Where to Find Reliable Sources of Health Information

~ from [Leesa Klich](#) ~

(Updated March 2018)

Hey!

Thank you for your interest in finding reliable sources of health information (my personal favourite thing!). :)

This document is full of links to credible websites that I trust to provide good quality health information.

*****NOTE FROM LEESA:** This document will be updated regularly! To get updates, make sure you head over to the blog post “[How to research health topics efficiently](#)” and enter your email address!

PART I - List of reliable sources of health information

- Sites grouped by topic (e.g. Health goals; Nutrition & food; Supplements; Fitness; and Medical & Science-based).
 - Sub-grouped by “official” sites (i.e. universities, hospitals, governments, etc.) and credible blogs (i.e. well-referenced personal or business blogs).

PART II - Articles about health research

- Recommended articles and blog posts that talk about the process of health research and how to understand it.

PART III - PubMed Tips

- My tips on searching PubMed and interpreting individual studies.

I hope this is a great resource for you, your clients, and your practice.

If there are any sites or other information that you'd like me to consider adding, please feel free to email me directly at: leesa@leesaklich.com

Thanks!

Leesa

Leesa Klich, MSc, R.H.N.

PART I - List of Reliable Sources of Health Information

Health goals information (“official” sites):

- NIH National Center for Complementary and Integrative Health
 - <https://nccih.nih.gov/>
- World Health Organization Health Topics
 - <http://www.who.int/topics/en/>
- NHS Choices
 - <https://www.nhs.uk/pages/home.aspx>
- NIH US National Library of Medicine - MedLine Plus - Trusted health information for you
 - <https://medlineplus.gov/>
- Harvard Health, Harvard Public Health & Harvard Medical School
 - <https://www.health.harvard.edu/search>
- Mayo Clinic
 - <https://www.mayoclinic.org/>
- UpToDate
 - <https://www.uptodate.com/home/uptodate-subscription-options-patients>
- National Institute for Health and Care Excellence
 - <https://www.evidence.nhs.uk/>
- Cochrane Library - Database of systematic reviews
 - “Trusted evidence. Informed decisions. Better health.”
 - Independent systematic reviews of multiple clinical studies.
 - By topic: <http://www.cochranelibrary.com/home/topic-and-review-group-list.html?page=topic>
 - Search: <http://onlinelibrary.wiley.com/cochranelibrary/search/>
- Trip medical database, a smart, fast tool to find high quality clinical research evidence
 - <https://www.tripdatabase.com/>
- HEALTH SYSTEMS EVIDENCE
 - <https://www.healthsystemsevidence.org/>
- Health Evidence
 - <https://www.healthevidence.org/search.aspx>
- PubMed Health
 - <https://www.ncbi.nlm.nih.gov/pubmedhealth/>

Nutrition, Nutrients & Food information (“official” sites):

- Health Canada’s Dietary Reference Intakes Tables for vitamins, elements (minerals), and macronutrients.
 - <https://www.canada.ca/en/health-canada/services/food-nutrition/healthy-eating/dietary-reference-intakes/tables.html>

(c) 2017-18 Leesa Klich, Content & credibility specialist for wellness professionals (a.k.a. health blogging nerd).

<https://leesaklich.com/>

- US Department of Agriculture Nutrients Database
 - <https://ndb.nal.usda.gov/ndb/>

Nutrition, Nutrients & Food information (credible blogs):

- Thinking Nutrition
 - Dr. Tim Crowe
 - Gives credible, evidence-based nutrition messages in plain language
 - <https://www.thinkingnutrition.com.au/>
 - <https://www.youtube.com/channel/UC7xD-b81K6-jW-p1FBevQBQ>
- Precision Nutrition
 - Precision Nutrition is the home of the world's top nutrition coaches
 - <https://www.precisionnutrition.com/>
- Diet vs Disease
 - Diet vs Disease has only one agenda:
 - Study the research objectively (without bias)
 - Translate information into plain English
 - Help you discover how to apply it to your current health condition
 - <https://www.dietvsdisease.org/>
 - https://www.youtube.com/channel/UCgTog8jKIbcUod_MwJ7fc8g
- Healthline Nutrition (previously Authority Nutrition)
 - <https://www.healthline.com/nutrition>
 - https://www.youtube.com/channel/UC7snF15Idi7px6XujWe_h9A
- Nutrition Facts (vegan slant)
 - Find out what the latest science is saying about your favorite foods to help you make the healthiest choices for you and your family
 - <https://nutritionfacts.org/>
- Stephan Guyenet
 - The science of body weight and health
 - <http://www.stephanguyenet.com/>
- Chris Masterjohn (paleo slant)
 - What I try to do here is grapple with complex science and translate it into practical principles that each of us can use to better support our health.
 - <https://chrismasterjohnphd.com/>

Supplement information (“official” sites):

- NIH Office of Dietary Supplements
 - <https://ods.od.nih.gov/>
- Health Canada’s Compendium of Monographs for Natural Health Products (Supplements).
 - <https://www.canada.ca/en/health-canada/services/drugs-health-products/natural-non-prescription/applications-submissions/online-solution/ingredients-database.html>
 - NOTE: This includes not just the science, but also many “traditional uses” as well.

(c) 2017-18 Leesa Klich, Content & credibility specialist for wellness professionals (a.k.a. health blogging nerd).

<https://leesaklich.com/>

Supplement information (credible blog):

- Examine.com
 - Your Unbiased Source on Nutrition and Supplements.
 - Independent, unbiased, and objective.
 - <https://examine.com/>

Fitness information (credible blog):

- Shredded by science
 - Shredded By Science are the leading online education provider to Personal Trainers around the World.
 - <https://www.youtube.com/channel/UCo12Fpc8P46b7jFZ31cZJzg>

More medical & science-based health information (“official” sites):

- University of California TV (Wellbeing Channel)
 - University of California Television (UCTV) shares educational and enrichment programming from the campuses, national laboratories, and affiliated institutions of the University of California. Subscribe to your favorites playlists to receive the latest research and information on topics that range from opera to oceanography, autism to artist profiles, global warming to global health. Arts, music, science, public affairs, health, business - if you're talking about it, you'll find it on UCTV.
 - <https://www.youtube.com/watch?v=u7fXoSXrjpk&list=PLepHs0thoryOez8mhvwEmVCHIkTwWz2iP>
- Stanford Medicine
 - The Stanford Medicine YouTube channel is a curated collection of contributions from our School of Medicine departments, divisions, students, and the community.
 - <https://www.youtube.com/channel/UCDrQaGaHpOav5y7m1SCSJRG>
- Demystifying Medicine
 - 4th year undergraduate students at McMaster University generate educational content in form of short presentations, animations, interviews, skits or by other creative ways that may help increase the understanding of complex clinical and biomedical material.
 - <https://www.youtube.com/channel/UCEwEYnO7yey-oBzyNu-AauQ>
- One Minute Medical School
 - Medical topics are broken down so the key point is presented understandably in sixty seconds by Dr. Rob Tarzwell, a Clinical Assistant Professor on the Faculty of Medicine at the University of British Columbia.

- [Skeptical of new health study? Great!](#)
- [How to research health topics efficiently](#)

Science of nutrition (how it's done and how it's communicated):

- [Why nutrition science is so confusing. \[Infographic\] - 9 reasons eating well isn't as straightforward as we'd like it to be.](#)
- [Processed Food vs Real Food: Why Nutrition Science is So Confusing \(and what to do about it\)](#)
- [I asked 8 researchers why the science of nutrition is so messy. Here's what they said.](#)
- [What have we learned about nutrition in the past 5 years?](#)
- [Why you should beware of those aiming to "separate fact from fiction" in nutrition research](#)
- [Everything Causes Cancer: How much can science really tell us?](#)

PART III - PubMed Tips

What is PubMed?

PubMed is an index, like a database. It's a comprehensive list of published articles about health studies. PubMed doesn't house most of the studies itself, it lists them, and links to the journals where they were published.

Sometimes the studies are available online for free through the journal they're published in, but not always. I recommend using the free Chrome extension called [Unpaywall](#). This helps to find free, legal versions of studies online.

PubMed does not index every single medical study in every single scientific journal in the world. In order to be indexed by PubMed there is minimum criteria to ensure quality research and credible information. There is a problem with some journals accepting any and every article submitted to them for publication – and the quality is questionable.

Here is a list of the journals cited in PubMed:

- https://www.nlm.nih.gov/bsd/serfile_addedinfo.html

PubMed Pros:

- Huge amount of information on every researched health topic.
- Only peer-reviewed and higher-quality studies are included.
- Includes old information and newly published research.
- Some studies are free.

PubMed Cons:

- Too much/very detailed/often conflicting information!
- High level information written in “science-ese” (may need a science background to fully understand).
- Many studies need to be purchased/or you need to go to a university library to get them. If a study is behind a “paywall,” try <http://unpaywall.org/>

PubMed Search Tips:

- 1) Go to PubMed. <https://www.ncbi.nlm.nih.gov/pubmed/>
- 2) Enter your keyword and hit “Search.”
- 3) On the left-hand side under “Article Types” you’ll see a “Review” button. If you click that it will filter out non-review. The benefit of this is to get rid of some of the “noise” - where different studies

(c) 2017-18 Leesa Klich, Content & credibility specialist for wellness professionals (a.k.a. health blogging nerd).

<https://leesaklich.com/>

contradict each other. Review studies are considered the highest level of studies because they look at several studies to find trends in the overall evidence. See: [A Rough Guide to Types of Scientific Evidence](#). You'll notice in that infographic the strongest evidence are the review studies (at the bottom).

4) If you're not looking for an overview or review of the evidence, or there aren't many yet, you can filter for the next-highest level of evidence – clinical studies. Clinical studies are those done in people, not cells on a lab bench, so they will have the most relevance to people.

You can activate this filter by clicking the “Clinical Trial” button on the left side under the “Article Types” heading.

Now that you've found a study...

You likely have an abstract to read through, and maybe even a link to a free copy of the study somewhere online.

There are a lot of things to consider when reading health research. I wrote a [guide on being skeptical of new studies here](#), and also included a bunch of helpful info in the previous section: PART II - Articles about health research - Understanding Health Research (2 pages back).

Here are some important points to consider:

- Science is a method of study that relies on objective observation/intervention and builds on previous knowledge. Its objective is to remove as much personal bias as possible.
- All studies are NOT created equal.
 - Was it done in animals, the lab, in people?
 - Was it observational, or was there an experiment/intervention?
 - Were the results clinically meaningful?
 - How big was the study?
 - What type of people were included in the study?
 - How long was the study (compared to what they were measuring)?
 - How long ago was the study done?
 - What do other studies that looked at the same thing find?

I've also written a lot of [articles on health research here](#).

~~~

All the best with your health research! Feel free to find more [info about health research, blogging, and content strategy on my blog here](#).

(c) 2017-18 Leesa Klich, Content & credibility specialist for wellness professionals (a.k.a. health blogging nerd).

<https://leesaklich.com/>

Hi, I'm Leesa!

I'm a content & credibility specialist for wellness professionals (otherwise known as a health blogging nerd). Strategically planned, high quality, science-based content to help grow your business is my jam. I help with all things health blogging, from research to writing to strategizing; all with the goal of elevating the wellness industry and improving public health on an epic scale.

When it comes to health, my passion is focusing on **what's** right, not **who's** right. I help wellness practitioners build credibility by understanding and creating quality content based on the best scientific research. I also compile health research, create customized and "done for you" blog posts, create optimization plans to boost blog traffic/subscribers, and help strategize/plan blog content.
